#### CHECKMARK HOME INSPECTION DISCLOSURE AND LIMITATIONS

- THIS HOME INSPECTION REPORT IS BASED **ON VISUAL OBSERVATION** OF THE PHYSICAL CONDITIONS OF THE BUILDING. CONDITIONS NOT READILY VISIBLE ARE SPECIFICALLY EXCLUDED.
- THE INSPECTOR IS NOT EXPECTED TO OPERATE ANY EQUIPMENT AND DOES NOT OPERATE ANY EQUIPMENT NOT NORMALLY OPERATED BY THE HOMEOWNER. THE INSPECTOR WILL NOT DISMANTLE EQUIPMENT; REMOVE NAILED OR BOLTED COVERS, MAKE HOLES, MOVE FURNITURE OR LIFT RUGS, OR PERFORM ANY TEST THAT REQUIRES DAMAGING OR DESTROYING THE ITEM BEING TESTED. THIS REPORT WILL COVER ONLY THOSE ITEMS BEING MENTIONED, AND THOSE ONLY AT THE TIME OF THE INSPECTION. THE REPORT DOES NOT CONSTITUTE OR IMPLY A GUARANTEE OR WARRANTY OF ANY KIND.
- THE REPORT WILL NOT INCLUDE ENVIRONMENTAL HAZARDS ASSOCIATED WITH THE HOUSE.

  CHECKMARK PLUS, INC. DOES NOT HAVE LABORATORY FACILITIES OR EXPERTISE IN THESE AREAS. WE
  RECOMMEND YOU CHECK YOUR LOCAL BOARD OF HEALTH OR ANY ENVIRONMENTAL SCIENTIST.
- THE REPORT REFLECTS OUR **PROFESSIONAL OPINION** OF THE CONDITION OF THE MAJOR STRUCTURAL, MECHANICAL AND ELECTRICAL ELEMENTS OF THE PROPERTY AS OF THE DATE OF THIS INSPECTION.
- CHECKMARK PLUS INC. DOES NOT ASSUME ANY LIABILITY FOR MISTAKES, OMISSIONS, OR ERROS IN
  JUDGEMENT BEYOND THE COST OF THIS REPORT. THIS LIMITATION OF LIABILITY SHALL INCLUDE
  AND APPLY TO ALL CONSEQUENTIAL DAMAGES, BODYLY INJURY AND PROPERTY DAMAGE OF ANY
  NATURE.
- CHECKMARK PLUS INC. DOES NOT ASSUME RESPONSIBILITY FOR THE COST OF REPAIRING OR REPLACING ANY UNREPORTED DEFECTS OR CONDITIONS.
- THE WOOD DESTROYING INSECT INSPECTION WILL BE LIMITED TO VISUAL INSPECTION OF ACCESSIBLE AREAS AND/OR SOUNDING OF ACCESSIBLE AREAS. CONCEALED AREAS BY DIRT, SIDING, RUGS, AND INSULATION MAY CONTAIN INFESTATION AND THE INSPECTOR WILL NOT BE LIABLE. THEREFORE, IN THE EVENT IT SHOUD SUBSEQUENTLY TURN OUT THERE MIGHT HAVE BEEN TERMITES AT THE TIME OF THE INSPECTION AND THERE IS A RESULTING LOSS OR DAMAGE TO THE PARTY FOR WHOM THE INSPECTION IS MADE AND LIMITED TO AND FIXED AS A SUM EQUAL TO THE AMOUNT OF THE REPORT FEE. BY SIGNING THIS DISCLOSURE THE BUYER UNDERSTANDS AND AGREES THAT SHOULD ANY PROBLEMS ARISE THE RIGHT TO SUE IS BEING FORFEIT. THE LIABILITY OF THE INSPECTOR IS LIMITED TO THE FEE PAID FOR THE SERVICES PROVIDED. THIS DISCLOSURE WAS PRESENTED TO THE CUSTOMER AND ITS SIGNATURE IS CONTAINED IN THE CKECKMARK PLUS PRE-INSPECTION FORM.
- THE BUYER AGREES HAVE SEEN A NJ HOME INSPECTOR LICENSE #24G100069800, AN ID FROM THE NATIONAL ASSOCIATION OF HOME INSPECTOR AS WELL AS BEING INFORMED THAT THE INSPECTOR HOLDS A NJ REALTOR LICENSE WITH CENTURY 21/ TEANECK, A VALID NJ REAL STATE APPRAISER TRAINEE LICENSE. ALSO, THE BUYER IS AWARE THE INSPECTOR HAVE RECEIVED HOME INSPECTIONS TRAINING CLASSES AT BERGEN ACADEMIES, HAS RECEIVED TRAINING FROM BGK HOME INSPECTIONS IN NJ, AND THE INSPECTOR IS A MECHANICAL ENGINEER GRADUATED FROM NEW JERSEY INSTITUTE OF TECHNOLOGY IN NJ. THE PARTIES HERETO COVENANT AN AGREE THAT THERE ARE NO REPRESENTATION, VERBAL UNDERSTANDINGS OR STATEMENTS CHANGING OR MODIFYING ANY OF THE TERMS OR PROVISIONS THIS INSPECTION REPORT AND THAT ALL TERMS, CONDITIONS AND PROVISIONS THEREOF ARE CONTAINED HEREIN IN WRITING

16:33 March 11, 2007

## **Marginal Summary**

This summary is not the entire report. The complete report may include additional information of concern to the client. It is recommended that the client read the complete report.

#### **Structure**

1. Stairs/Handrails: Fair Stairway from basement to the second floor needs some reinforcement / secure steps

#### **Basement**

2. Main Basement Windows: Fair replace in the near future

#### **Bathroom**

- 3. 1st floor main Bathroom Windows: Fair Seal and caulk to avoid water filtration
- 4. 2nd floor main Bathroom Walls: Fair condition Ceramic tiles missing at the bottom of the wall, behind the toilet area

16:33 March 11, 2007

Page 2 of 16 sample\_report

## **Defective Summary**

This summary is not the entire report. The complete report may include additional information of concern to the client. It is recommended that the client read the complete report.

#### **Exterior Surface and Components**

1. Basement Windows: Fair water filtration noticed on windows located at the rear part of the property

#### **Common Spaces**

2. Stairs/Handrails: Wood stairs with wood handrails Handrails from 1st floor to second floor are loose (Safety)

#### Roof

3. Leader/Extension: Missing Extend runoff drains to move water away from foundation

#### **Garage/Carport**

- 4. Side Garage Door Opener: Lift Master 1. Code to open garage door from outside was Inoperative at time of inspection,
  - 2. Buyer to request a remote garage opener from the seller prior to closing,
  - 3. Safety reverse system in operation,
  - 4. Light beam safety is recommended

#### Structure

- **5. Foundation:** Concealed 1. Re-pointing required at the front face of the property by the garage area.
  - 2. Seal cracks and repair foundation wall at the rear part of the property, patio area

#### **Basement**

6. Main Basement Electrical: 110 VAC GFCI GFCI does not trip when tested

#### **Air Conditioning**

**7. Main AC System A/C System Operation:** Not inspected To avoid possible compressor damage due to outside temperature below 60 degrees, the unit was not tested.

AC vents at the second floor are located on the surface floor. It is not the most functional spot.

#### **Bathroom**

8. 2nd floor main Bathroom Sink/Basin: Pedestal The sink is loose

#### Kitchen

9. 1st Floor Kitchen Electrical: 110 VAC GFCI Faulty GFCI outlet-replace

#### **Bedroom**

- 10. 2nd floor bedroom #1 Bedroom Closet: Large Walls in closet is damaged
- 11. 2nd floor bedroom #2 Bedroom Closet: Large Missing Closet door hardware

Page 3 of 16 sample\_report

#### **Definitions**

NOTE: All definitions listed below refer to the property or item listed as inspected on this report at the time of inspection

A Acceptable Functional with no obvious signs of defect.

NP Not Present Item not present or not found.

NI Not Inspected Item was unable to be inspected for safety reasons or due to lack of power, inaccessible, or disconnected at time of

inspection.

M Marginal Item is not fully functional and requires repair or servicing.

D Defective Item needs immediate repair or replacement. It is unable to perform its intended function.

#### **Lots and Grounds**

This inspection does not cover evaluation of soil, or stability of the land that the house is built on. Since the inspection is essentially visual, it does not assess the draining capabilities of the property, nor does it assess any underground piping, septic systems, or sewer service piping. Some areas that are build too close to the ground are inaccessible and excluded from the report. It is recommended that the buyer obtain information regarding prior foundation or structural repairs.

Common Spaces
A = Acceptable, NP = Not Present, NI = Not Inspected, M = Marginal, D = Defective
1. Entrance Door: Wood
2. Stairs/Handrails: Wood stairs with wood handrails Handrails from 1st floor to second floor are loose (Safety)
3. Ceilings: Fixed ceiling
4. Walls: Fair condition
5. Floors: Hardwood
6. Windows: Fair
7. Electrical: 110 VAC outlets and lighting circuits
8. Fire Extinguishers: Part of the Certificate of occupancy
9. Fire or Smoke Detectors: Part of the Certificate of Occupancy
10. Sprinkler System: Not part of the inspection's scope
11. Door Bell/Intercom System: None
Roof
The inspector is not responsible for determining age of the roof nor the potential for future leakage. The inspector is not required to walk on the
roof. The only way to know if the roof is water tight is to observe it during a prolonged rainfall.
A = Acceptable, NP = Not Present, NI = Not Inspected, M = Marginal, D = Defective
Main Roof Surface —
1. Method of Inspection: Ground level using binoculars and also from windows at second floor
2. Unable to Inspect: 15% Height of roof
3. Material: Asphalt shingle The inspector cannot determine if there is any active leaks since no heavy rain has been
present during previous days to the inspection Monitor its condition during heavy rain season.
4. Type: Gable
5. Approximate Age: Unknown
Rear part of the property Chimney
6. Chimney: Brick Chimney was not inspected from inside. A qualified chimney company must provide service and
cleaning once a year to AVOID any FIRE HAZARD, A chimney rain cap was noticed from ground floor
7. Flue/Flue Cap: Not visible from the ground floor.
8. Chimney Flashing: Not visible from the ground floor.
9. De Valleys: Fair
10. Skylights:
11. 🔲 🔲 🔲 Plumbing Vents: Fair
12. Roof Water Control
13. Gutters: Aluminum Cleaning the gutters is required as part of the regular maintenance, Monitor gutters during
heavy rain season for possible leaks. The inspector cannot determine if these are leaking since no rain condition was
present at the time of the inspection
14. Downspouts: Aluminum
15. Leader/Extension: Missing Extend runoff drains to move water away from foundation
Garage/Carport
Determining the heat resistance rating of firewalls is beyond the scope of this inspection. Flammable materials should not be stored within closed garage areas.
A = Acceptable, NP = Not Present, NI = Not Inspected, M = Marginal, D = Defective Side Garage

14.		卤			Heating:

#### **Electrical**

This report addresses the primary electrical power distribution system serving the building. Any electrical repairs attempted by anyone other than a licensed electrician should be approached with caution. The power to the entire building should be turned off prior to beginning any repair efforts, regardless of how trivial the repair may seem. Aluminum wiring requires periodic inspection and maintenance by a licensed electrician. Operation of time clock motors is not verified. Inoperative light fixtures often lack bulbs or have dead bulbs installed. Light bulbs are not changed during inspection, due to time constants. Any ceiling fans are checked for general operation only. Smoke alarms should be tested regularly. Security alarm systems and their components are not addressed by this inspection. We recommend consulting with the alarm monitoring company for further information.

#### **ADDITIONAL TIPS**

- Have older homes inspected yearly by a qualified electrician and fix problems immediately.
- Don't overload electrical circuits by plugging in too many appliances.
- Avoid attaching a two prong adapter to a three-prong plug, and inserting it into an outlet that's not grounded.
- Watch for loose, unattached wires hanging from the ceiling or suspended from the walls. Such wires indicate shoddy workmanship.
- Conduct self-tests such as resetting circuit breakers to make sure they will function properly
- Ensure access to fire escape through a window.

Windows:

- Know your electrical circuit. Know which outlets and products are connected to each circuit. Label them!
- Immediately disconnect any electrical product if problems develop and have it examined by a competent professional.
- Follow manufacturer's instructions on what types of electrical connections are needed for all electrical appliances.
- Smoke detectors MUST be functioning and MUST be tested twice a month as part of a maintenance routine.
- Carbon monoxide detectors MUST be functioning and MUST be tested as part of a maintenance routine.

10. Electrical Disconnect: Breaker disconnect
11. Exposed Ductwork:
12. DBlower Fan/Filters: Filter Replace filter every 6 weeks  13. DDD Thermostats: Individual
13. All Inermostats. Individual
Plumbing
Water quality or hazardous materials (lead) testing is available from local testing labs. All underground piping relating to water supply, waste, or sprinkler use is excluded from this inspection. Leakage or corrosion in underground piping cannot be detected by a visual inspection. The temperature pressure relief valve, at the upper portion of the water heater, is a required safety valve which should be connected to a drain line of proper size terminating just above floor elevation. If no drain is located in the floor a catch pan should be installed with a drain extending to a safe location. The steam caused by a blow-off can cause scalding. Improper installations should be corrected.  To keep your faucets from leaking, preventive maintenance is the name of the game. Almost all faucets have an aerator at the tip of the faucet spout. An aerator mixes air and water for a smooth flow. You should clean aerators periodically, perhaps once a year, to remove mineral and debris buildup. Leaks should be fixed immediately since they can quickly develop into a serious break. Temporary repairs are only temporary, and wrapping the pipe usually fails. If you find a fixture that is leaking, turn off the shutoff valve for that device. Then locate the leak. Try to tighten any fittings that leak. A quarter or half turn with a wrench might do the trick. Be careful not to over-tighten fittings. Another possible cause is that the pipes are undersized and the water velocity is too high.  Estimated faucet leakage rates  Drips  Odrops per minute = 192 gallons per month  Odrops per minute = 310 gallons per month  Odrops per minute = 320 gallons per month

8. Water Heater Operation: Functional at time of inspection

Draining the water heater at least twice a year is recommended to relieve sediment build up in the tank. Follow the manufacturer's service and maintenance instructions

9. Manufacturer: A.O. Smith

10. Type: Natural gas Capacity: 40 Gal.

11. Approximate Age: 1 Year Area Served: Whole building

12. TPRV and Drain Tube: Copper

## **Heating System**

The inspector is not equipped to inspect furnace heat exchangers for evidence of cracks or holes, as this can only be done by dismantling the unit. This is beyond the scope of this inspection. Some furnaces are designed in such a way that inspection is almost impossible. The inspector cannot light pilot lights. Safety devices are not tested by the inspector.

A = Acceptable, NP = Not Present, NI = Not Inspected, M = Marginal, D = Defective

**Basement Heating System -**

13. Suspected Asbestos: Not part of the inspection's scope
Bathroom
Shower pans are visually checked for leakage, but leaks often do not show except when the shower is in actual use. Determining whether shower
pans, tub/shower surrounds are water tight is beyond the scope of this inspection. It is very important to maintain all grouting and caulking in the bath areas. Very minor imperfections can allow water to get into the wall or floor areas and cause damage. Proper ongoing maintenance will be required in
the future.  To keep your faucets from leaking, preventive maintenance is the name of the game. Almost all faucets have an aerator at the tip of the faucet spout.
An aerator mixes air and water for a smooth flow. You should clean aerators periodically, perhaps once a year, to remove mineral and debris buildup.
Leaks should be fixed immediately since they can quickly develop into a serious break. Temporary repairs are only temporary, and wrapping the pipe usually fails. If you find a fixture that is leaking, turn off the shutoff valve for that device. Then locate the leak. Try to tighten any fittings that leak. A
quarter or half turn with a wrench might do the trick. Be careful not to over-tighten fittings. Another possible cause is that the pipes are undersized and
the water velocity is too high.

#### **Final Comments**

This report contains a professional opinion of the property you are buying. It is NOT a warranty or insurance on this property. The inspection has been performed by a Mechanical engineer and NJ licensed Home inspector # 24GI00069800.

Issues considered marginal and/ or defective by the inspector are subject to the buyer's final decision after consulting with the buyer's attorney. This inspection is based on the inspector's professional opinion and the final request for repairs to be done on the subject property are not the inspector's decision.

The inspector has spent a reasonable amount of hours inspecting your future home . He has done his best to cover all the areas of major risk and concern.

It is the buyer's job to understand the inspector is a human being and cannot find out all the facts on the property during the inspection.

Please notice that environmental inspection is NOT part of this home inspection. Mold, asbestos, any gas or substance found at the property or outside the living space are NOT part of this home inspection. Radon Gas can be tested ONLY it is part of the inspection and requested by the buyer prior to perform the home inspection.

# Important Consumer Information Regarding the Scope and Limitations of the Inspection

Please read this entire page as it is part of this report. This report is not a guarantee or warranty as to the absence of wood destroying insects nor is it a structural integrity report. The inspector's training and experience do not qualify the inspector in damage evaluation or any other building construction technology and/or repair.

- 1. About the Inspection: A visual inspection was conducted in the readily accessible areas of the structure(s) indicated (see Page 1) including attics and crawlspaces which permitted entry during the inspection. The inspection included probing and/or sounding of unobstructed and accessible areas to determine the presence or absence of visual evidence of wood destroying insects. The WDI inspection firm is not responsible to repair any damage or treat any infestation at the structure(s) inspected, except as may be provided by separate contract. Also, wood destroying insect infestation and/or damage may exist in concealed or inaccessible areas. The inspection firm cannot guarantee that any wood destroying insect infestation and/or damage disclosed by this inspection represents all of the wood destroying insect infestation and/or damage which may exist as of the date of the inspection. For purposes of this inspection, wood destroying insects include: termites, carpenter ants, carpenter bees, and reinfesting wood boring beetles. This inspection does not include mold, mildew or noninsect wood destroying organisms.

  This report shall be considered invalid for purposes of securing a mortgage and/or settlement of property transfer if not used within ninety (90) days from the date of inspection. This shall not be construed as a 90-day warranty. There is no warranty, express or implied, related to this report unless disclosed as required by state regulations or a written warranty or service agreement is attached.
- 2. Treatment Recommendation Guidelines Regarding Subterranean Termites: FHA and VA require treatment when any active infestation of subterranean termites is found. If signs of subterranean termites but no activity are found in a structure that shows no evidence of having been treated for subterranean termites in the past, then a treatment should be recommended. A treatment may also be recommended for a previously treated structure showing evidence of subterranean termites but no activity if there is no documentation of a liquid treatment by a licensed pest control company within the previous five years unless the structure is presently under warranty or covered by a service agreement with a licensed pest control company.
- 3. Obstructions and Inaccessible Areas: No inspection was made in areas which required the breaking apart or into, dismantling, removal of any object, including but not limited to: moldings, floor coverings, wall coverings, siding, fixed ceilings, insulation, furniture, appliances, and/or personal possessions; nor were areas inspected which were obstructed or inaccessible for physical access on the date of inspection. Your inspector may write out inaccessible areas or use the key in Section IV. Crawl spaces, attics, and/or other areas may be deemed inaccessible if the opening to the area is not large enough to provide physical access for the inspector or if a ladder was required for access. Crawl spaces (or portions thereof) may also be deemed inaccessible if there is less than 24 inches of clearance from the bottom of the floor joists to the surface below. If any area which has been reported as inaccessible is made accessible, the inspection company may be contacted for another inspection. An additional fee may apply.
- 4. Consumer Maintenance Advisory Regarding Integrated Pest Management for Prevention of Wood Destroying Insects. Any structure can be attacked by wood destroying insects. Homeowners should be aware of and try to eliminate conditions which promote insect infestation in and around their structure(s). Factors which may lead to wood destroying insect infestation include: earth to wood contact, foam insulation at foundation in contact with soil, faulty grade, improper drainage, firewood against structure(s), insufficient ventilation, moisture, wood debris in crawlspace, wood mulch or ground cover in contact with the structure, tree branches touching structure(s), landscape timbers and wood decay. Should these or other conditions exist, corrective measures should be taken in order to reduce the chances of infestation of wood destroying insects and the need for treatment.
- 5. Neither the inspecting company nor the inspector has had, presently has, or contemplates having any interest in the property inspected.
